

Douglas Fir - 2x12

Bright Wood: An Engineered Wood Products Company

Bright Wood started as a ponderosa pine cut stock manufacturer in 1960 in Madras, Oregon. We transitioned from a solid wood manufacturer into an engineered wood products company mainly to help our customers increase the performance of their windows and doors.

Today our original Madras location has grown to 16 plants on 96-acres. We also have a seven-plant, 35-acre site in Redmond, Oregon; another five-plant, 15-acre facility in Prineville, Oregon; and a 26-acre site in Culver, Oregon dedicated to engineered dimension lumber.

Why Choose Fingerjointed Dimension Lumber with the Bright Wood Stamp?

Bright Wood has been in the wood industry since 1960; we've been fingerjointing wood for 46 years. We have a track record. Along the way we've developed manufacturing and tooling technologies and a knowledge base that give us a competitive advantage when it comes to getting it right the first time.

Just What Certified Fingerjointed Dimension Lumber Should Be

Structural-glued dimension lumber is accepted for use under all model building codes and is interchangeable with solid-sawn dimension lumber of the same size, grade and species, and is grade-marked accordingly.

Bright Wood's dimension lumber is certified as CERT EXT JNTS by the Western Wood Products Association (WWPA), which means the joints are certified for both vertical and horizontal applications.

Douglas Fir - 2x8

Bright Wood uses a water-proof, exterior-type adhesive that meets the requirements of ASTM Product Standard D2559 and the WWPA's Glued Products Procedures for Mill Certification and Quality Control, C/QC 101. Among those requirements, is a "heat resistant adhesive" represented by the "HRA" on Bright Wood's WWPA certification stamp.

Dimensional Lumber in the Size, Species, & Grade You Need

Bright Wood's fingerjoint dimension lumber products are manufactured on demand to ensure you get the tallies you need. We offer multiple size and species options.

Size Options:

Widths: 2x6, 2x8, 2x10, and 2x12

Lengths: from 6' up to 60'

Species Options:

Douglas Fir / Larch

Douglas Fir

Hem-Fir

White Fir

Spruce-Pine-Fir (SPF)

SPF South

Western Woods (WW)

White Fir - 2x6

Grade Stamp Options:

Kiln Dried Heat Treated (KDHT) stamp available for all species.

Shipping Options:

BNSF and Union Pacific rail-car loading capability.

Bright Wood Stamp = Quality

Bright Wood's dimension lumber is graded and tested throughout the manufacturing process to ensure it meets the same load and strength requirements as solid-sawn lumber. We use the Western Wood Products Association's (WWPA) rules and specifications.

Examples of quality control procedures include:

- Tension break test and delamination boil test for joint quality (hourly on the shopfloor).
- Durability cycle test to simulate how glue joints perform when moisture content causes wood to shrink or swell (in the lab).
- Joint strength tests to verify how the joint will perform when a uniform tension is applied (in the lab).
